Dear Sir/Madam,

I am a Full-Stack developer with 4 years of experience in designing and developing highly scalable, resilient, fault-tolerant systems on a variety of platforms and technologies. Besides holding a Bachelor's degree in Computer Science and Engineering, I am currently pursuing my Master of Science in Computer Science at the University of Colorado, Boulder. Before joining the University of Colorado - Boulder, I used to work at Akamai Technologies as a Senior Software Engineer. During my stint at Akamai, I have designed and developed multiple applications and frameworks on a variety of technologies from scratch. At Akamai, I got a chance to work on a wide range of projects, to name a few - data engineering, full-stack application development, and automation. During my tenure as a Senior Software Engineer, my responsibilities included - designing applications, setting coding standards, performing code reviews, mentoring junior engineers, writing design documents, hiring software engineers for the team.etc., I also hold strong experience in managing multiple projects and programs.

I am an enthusiastic and conscientious individual with a solid fundamental understanding of various computer science disciplines with excellent communication and soft skills. Through my projects in undergraduate, internships, and full-time employment at Akamai, I have demonstrated that I can complete tasks effectively and exceed expectations with minimal guidance and supervision. I am a fun-loving individual and an excellent team player. I work cohesively with my project partners in achieving the set target. I have received several awards for my contributions to the projects that I have worked on. Additionally, I have been promoted twice and was designated Senior Software Engineer in just three years for my outstanding contributions to the projects.

I am also an eager learner who loves to pick up new skills, and technologies and am a strong believer in hands-on experience. When building products I tend not to just solve problems and build solutions that just serve the need. I tend to identify the technologies that best fit the needs of our solution and design applications in a way that builds an experience in getting your needs addressed. Besides work, In my free time, I tend to participate in volunteering activities that help in the betterment of society because I believe in having a positive impact on society and the world that we live in.

I strongly believe I will be a significant value add to any team I am part of, by passionately contributing to the growth and scale of applications that I get a chance to work on. Please do not hesitate to reach out to me for any further questions.

Kind Regards,

Hemanth Rao Karade Nagendra
